

Andreas Steiner

(858) 239-4210 ◇ San Diego CA, Seattle WA
andysteiner778@gmail.com ◇ linkedin.com/in/andreas-steiner-5198b8225

Neuroscience & Operations specialist with experience in neural data analysis, clinical workflows, and sterile lab environments.

EDUCATION

B.S. in Psychology, Minor in Bioethics — University of Washington | GPA 3.72 | Dean's List (All Quarters) June 2025

SKILLS

AI & Machine Learning: PyTorch, TensorFlow, scikit-learn, Hugging Face (Transformers), PEFT, PCA, t-SNE, PHATE
Computer Vision & DSP: OpenCV, Librosa, FFT, Spectrograms, EEG/ECoG, Artifact Removal, Real-Time Noise Filtering
Software & Tools: Python (mne, pyserial, Nilearn, PyIsl, Numba, SciPy), C++, SQL, Docker, Linux CLI, n8n, Claude Code
Hardware & Sterile Ops: Soldering, Electronics Repair, Device Diagnostics, SOPs, Sterile Technique, QA, Safety Compliance

EXPERIENCE

Medical Assistant / Phlebotomist — OneStop Medical Family Medicine Clinic June 2024 – September 2025

- Handled high-throughput medical workflows, including vitals, vaccinations, phlebotomy, and USCIS I-693 processing, with strict documentation accuracy. Managed triage and initial clinical assessments; upheld sterile technique compliant with CDC practices.

Research Assistant — Neurobehavioral Laboratory (EEG/ECoG) March 2025 – July 2025

- Interfaced Python with Backyard Brains SpikerBox hardware to stream raw EEG signals via serial communication, troubleshooting hex data packets to ensure signal integrity for real-time BCI control.
- Decoded high-density human ECoG, EEG, and genomic datasets using PCA, t-SNE, and PHATE to map neural manifolds and isolate spectral features (FFT) associated with cognitive processing.

Research Assistant / Surgical Technician — Neonatal Neuroscience Laboratory (Wood Lab) May 2023 – June 2024

- Performed rodent surgical procedures (Mice, Rats, Ferrets) to evaluate neuroprotectant efficacy for translational research targeting neonatal Hypoxic-Ischemic Encephalopathy (HIE) in children using the Rice-Vannucci carotid artery ligation model.
- Engineered a Computer Vision (ImageJ/Fiji) tool for automated neuron density analysis, increasing throughput by >90% and presenting findings at the 2024 UW Research Symposium.
- Managed lab operations (QA, inventory, compliance) at UW Medicine Pediatric Neuroscience; presented findings on mechanisms of Deep Brain Stimulation (DBS) and sulforaphane as a neuroprotectant.

Property & Facilities Operations Manager — University District, Seattle April 2023 – June 2024

- Directed facility operations for a \$5M+ residence, managing 30+ person teams and self-performing technical repairs (plumbing, electrical, structural) while ensuring compliance with municipal safety and insurance standards.

PERSONAL PROJECTS

Meta TRIBE v2 Neural Encoding

- Integrated Meta's TRIBE v2 via Claude Code to develop a voxel-wise analysis pipeline for precise neural decoding and optimization of short-form content.

EEG Flappy Bird

- Developed a Python BCI game (Pygame) using EEG-detected blinks for real-time control. Implemented live noise isolation and signal processing.

Real-Time Fall Detection System

- Engineered an elder-care monitoring system in Python using OpenCV for real-time object detection and automated emergency alerts.

FPV Racing Drone

- Soldered and programmed a 70+ MPH racing quadcopter involving PID tuning and electrical/mechanical troubleshooting.

CERTIFICATIONS

- Medical Assistant Phlebotomist** — WA Department of Health (DOH) November 2024 – Present
- Live Rodent Surgery & Animal Handling** — UW Office of Animal Welfare (OAW) May 2023 – June 2024
